# The analyst between operations and the P&L.

Most FP&A decks explain what happened. Finance leaders need someone who can also say why volume moved, what it means for staffing next quarter, and which lever to pull.

I support operations finance at PNC Financial Services. Before that I owned budget-variance packs and tuition/scholarship forecasts at upGrad, ran sales-side MIS and working-capital analysis at BYJU'S, and produced leadership EBITDA and leverage reporting at BSNL.

The through-line is consistent: take messy operational data, put it in a controlled model, and hand executives a clean story with numbers they can defend.

**4+ YEARS**  
FP&A-style work in U.S. banking and international operations

**2%**  
Throughput increase supported at PNC via process and unit-cost work

**MS + MBA**  
Business Analytics and Accounting & Finance

**SYSTEMS**  
Excel, Power BI, Tableau, NetSuite, SAP, Oracle

## What I want a recruiter to see in 30 seconds

- Variance analysis with written commentary — not a raw export.
- Forecasting that feeds staffing and resource decisions, not just a slide.
- Executive dashboards designed for operators who do not live in the GL.
- Capital toolkit already used in production: NPV, IRR, ROI, payback.
- ERP fluency across NetSuite, Banner, SAP, and Oracle.
- Dual credential stack: analytics methods plus MBA finance judgment.

## Signature skills

KPI design

Variance analysis

DCF valuation

Forecasting

Month-end reporting

Executive dashboards

Working capital

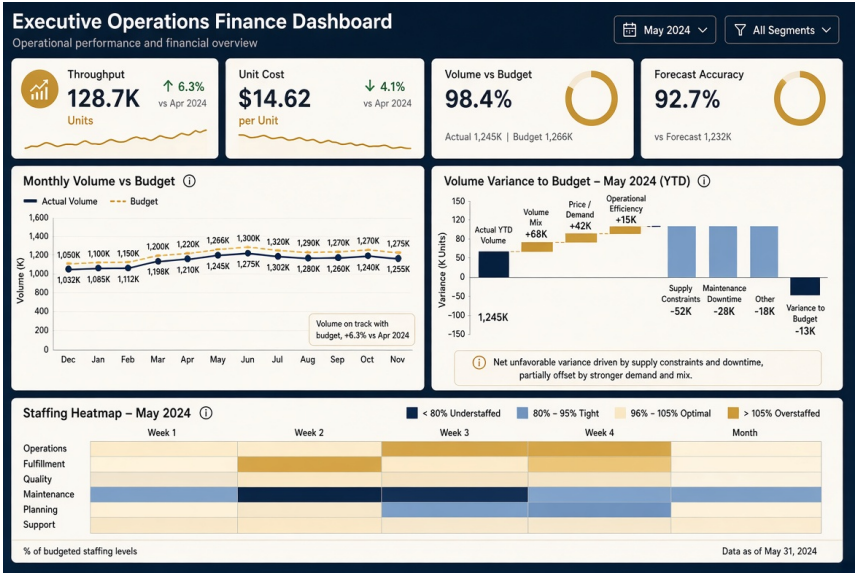

Staffing models

Grant reporting

Process standardization

# Make production visible enough to move unit cost.

Financial Analyst, PNC Financial Services · June 2025 – Present

Illustrative reconstruction of an operations-finance dashboard. Confidential PNC figures are not shown.

PROBLEM

Operations leadership needed one view of volume versus budget, workflow bottlenecks, and the staffing implication before the quarter slipped.

APPROACH

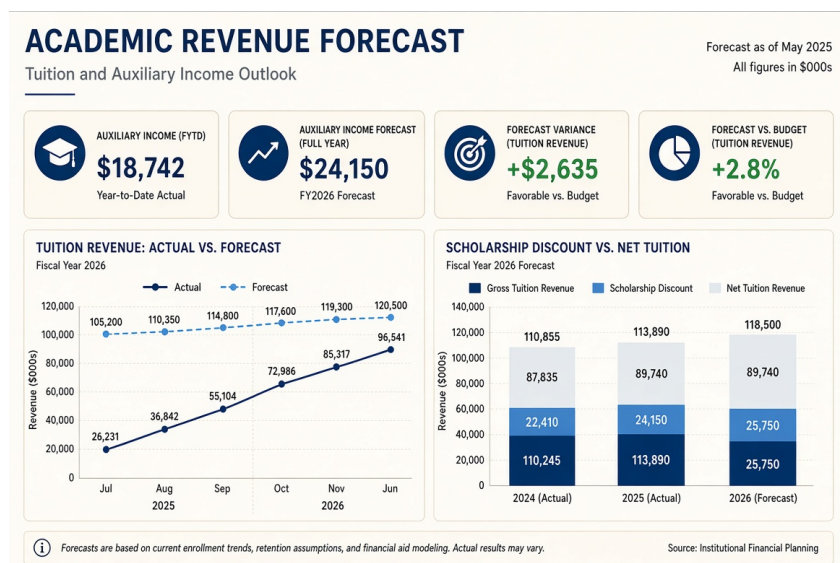

Built advanced Excel models with nested formulas, complex lookups, and pivots. Ran monthly actual-vs-budget and prior-period variance with written commentary. Maintained executive KPI dashboards versus quarterly targets and fed reforecasts for staffing and resources.

RESULT

Partnered on process improvements that contributed to a 2% increase in throughput and a reduction in unit processing costs. Standardized reporting templates to improve month-end close efficiency, controls, and data integrity.

# Forecast tuition, discounts, and the miss.

Financial Analyst, upGrad · April 2022 – July 2023 · Hyderabad

*Illustrative reconstruction of a tuition / auxiliary / discount forecast view. Employer data is not disclosed.*

## Scope owned

Monthly budget-vs-actual variance reports across campus divisions; forecasting models for tuition revenue, auxiliary income, and scholarship discounting; federal and state grant compliance support.

## Systems move

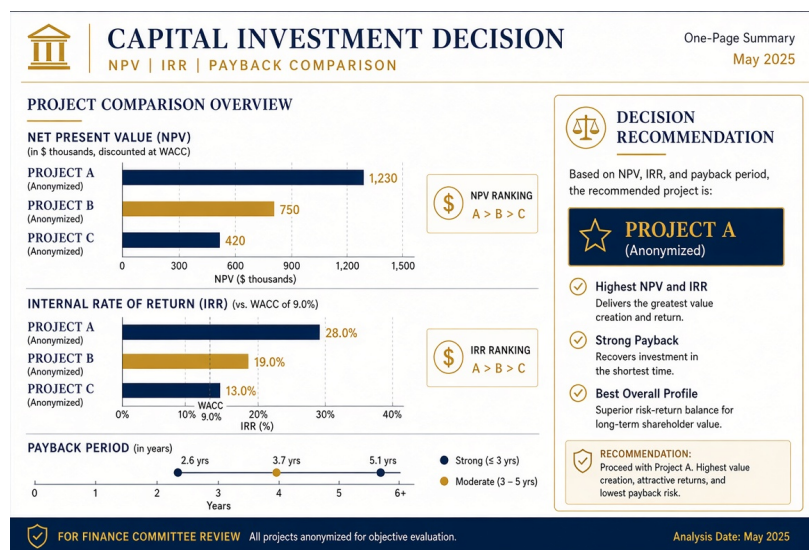

Automated financial reporting in Oracle NetSuite and Banner ERP so the pack was no longer a manual extract. Designed Power BI and Tableau dashboards for non-finance stakeholders who still needed the story.

## Capital overlay

Performed NPV and IRR analysis for capital projects so investment decisions sat next to the operating forecast instead of in a separate deck.

# Put a number on “should we fund this?”

upGrad capital projects · BYJU'S ROI, payback, and pricing · BSNL liquidity MIS

Illustrative decision pack. Projects anonymized. Methods reflect analyses performed in role.

## Valuation methods in actual use

DCF / NPV, IRR versus hurdle, ROI, and payback. At BYJU'S this sat beside dynamic pricing models and departmental budgets so commercial and capital questions used the same logic.

## Working capital and margin

Analyzed AP/AR cycles and liquidity. Prepared monthly MIS covering gross margin per unit, capacity utilization, and actual-vs-standard cost variance — the operating counterpart to a DCF slide.

## Foundation at BSNL

Daily cash monitoring for procurement and CAPEX liquidity, overhead and labor variances, and leadership MIS on EBITDA margins and debt-to-equity, extracted from SAP and Oracle.

Experience

JUN 2025 – PRESENT

**Financial Analyst, PNC**

Operations finance partner: throughput and unit cost, executive KPIs, production-volume models, monthly variance commentary, quarterly staffing reforecasts, month-end template standardization. Cleveland, OH.

APR 2022 – JUL 2023

**Financial Analyst, upGrad**

Budget-vs-actual packs, tuition/auxiliary/scholarship forecasts, NetSuite and Banner automation, Power BI and Tableau, NPV/IRR, grant compliance. Hyderabad.

JAN 2021 – MAR 2022

**Sales Analyst, BYJU'S**

Department budgets, standard-cost variance, AP/AR and working capital, ROI and payback, dynamic pricing, monthly MIS on margin and capacity. Vijayawada.

JAN 2019 – AUG 2019

**Junior Financial Analyst, BSNL**

Overhead and labor variance, daily cash for procurement and CAPEX, EBITDA and leverage MIS, SAP/Oracle extraction. Hyderabad.

Education & honors

UNIVERSITY OF NEW HAVEN

**M.S. Business Analytics**

Aug 2023 – May 2025

JNTU KAKINADA

**MBA, Accounting & Finance**

Jul 2018 – Dec 2020

ACHARYA NAGARJUNA UNIVERSITY

**Bachelor's, Accounting & Finance**

Aug 2015 – May 2018

Honors: Inducted Member, Beta Gamma Sigma · Merit Scholarship — Academic Excellence Award  
Languages: English (professional) · Telugu (native) · Hindi (limited working)

Primary tools

Excel (advanced) · Power BI · Tableau · Oracle NetSuite · Banner · SAP · Oracle ERP

## What this packet is

- A recruiter-facing sample of how I frame operations-finance problems: problem, approach, result.
- Dashboards and charts are reconstructions of the type of work I produce — not confidential employer files.
- Walk any case in three minutes. Start with PNC operations finance or the upGrad forecast engine.
- Profiles: [linkedin.com/in/bandarusaisiri](https://www.linkedin.com/in/bandarusaisiri) and [github.com/saisiri-bandaru](https://github.com/saisiri-bandaru).
